

What is claimed is:

1. A resin tank comprising:

5 a tank body for reserving a liquid, the tank body being made of resin, the tank body having at least a circular hole that connects with an inside of the tank body;

a pipe sealing member closely fitted into the circular hole; and

a pipe installed in the pipe sealing member.

10 2. The resin tank according to claim 1, wherein the pipe is detachable from the pipe sealing member.

3. The resin tank according to claim 1, wherein the pipe is integrally molded with the pipe sealing member.

15

4. The resin tank according to claim 1, wherein the pipe sealing member has at least a pipe fitting hole.

5. The resin tank according to claim 4, wherein the number of the pipe fitting
20 holes is plural.

6. The resin tank according to claim 1, wherein the pipe sealing member is

made of elastic material and has a closely fitting portion that is closely fitted into the circular hole, the closely fitting portion and the pipe fitting hole having a concentric circle with each other.

5 7. The resin tank according to claim 1, wherein the resin tank is an oil tank for use in a loading apparatus of an industrial vehicle.

8. The resin tank according to claim 1, wherein the pipe is made of metallic material.
